

How do I reset course content?

If you have permission as an instructor, you can reset course content with your course settings in Canvas. However, resetting course content permanently removes all content and it cannot be recovered.

When you reset course content, you reset all content in the course including:

- Course ID—external URLs will no longer direct back to the course unless they are manually changed
- LTI tools added at the course level

Course details and enrollments will remain intact within your course. Following the reset, your course will be unpublished and will not be visible to students. If you added the course to the Dashboard, it will still appear in the Dashboard after a reset.

Notes:

- Course content cannot be reset in Blueprint Courses.
- If the [account feature option](#), Reset UUID on Course Reset, is enabled in your institution, the course UUID is always reset when you reset course content. If you have any questions, contact your admin.

Open Settings

Open Settings

In Course Navigation, click the **Settings** link.

Reset Course Content

Reset Course Content

In the sidebar, click the **Reset Course Content** link.

Confirm Course Reset

Confirm Course Reset

Click the **Reset Course Content** button.
