Installing CA Certificates

- Install Certificate Authority certificates
- Installing the Certificate Profile on Mac/iPad (iOS)

Install Certificate Authority certificates

These instruction assume the user has administrative access to the server/workstation.

Windows

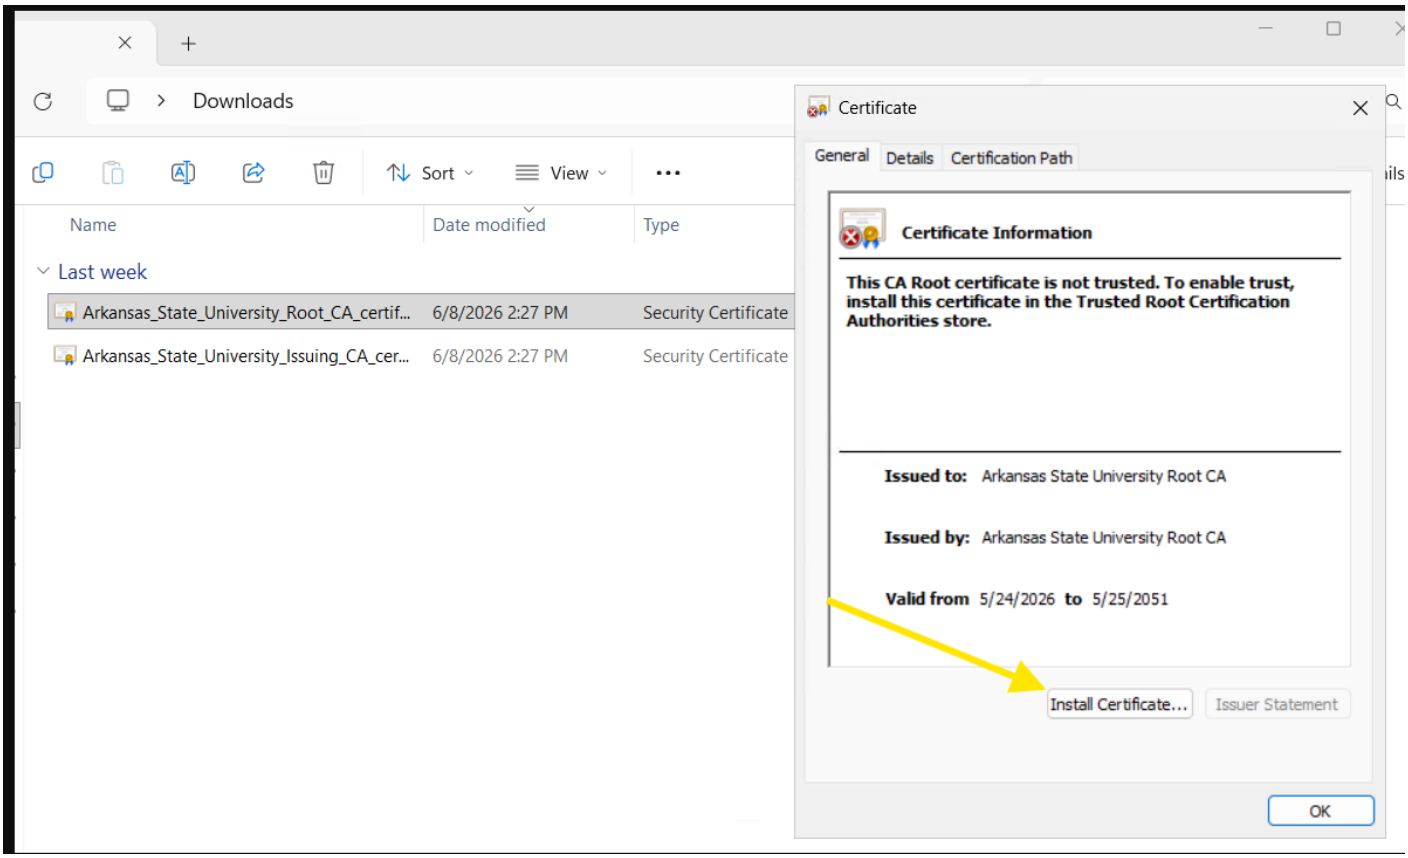

First copy the CA certificate(s) to the Windows server/workstation.

The following files were copied to the user account home directory.

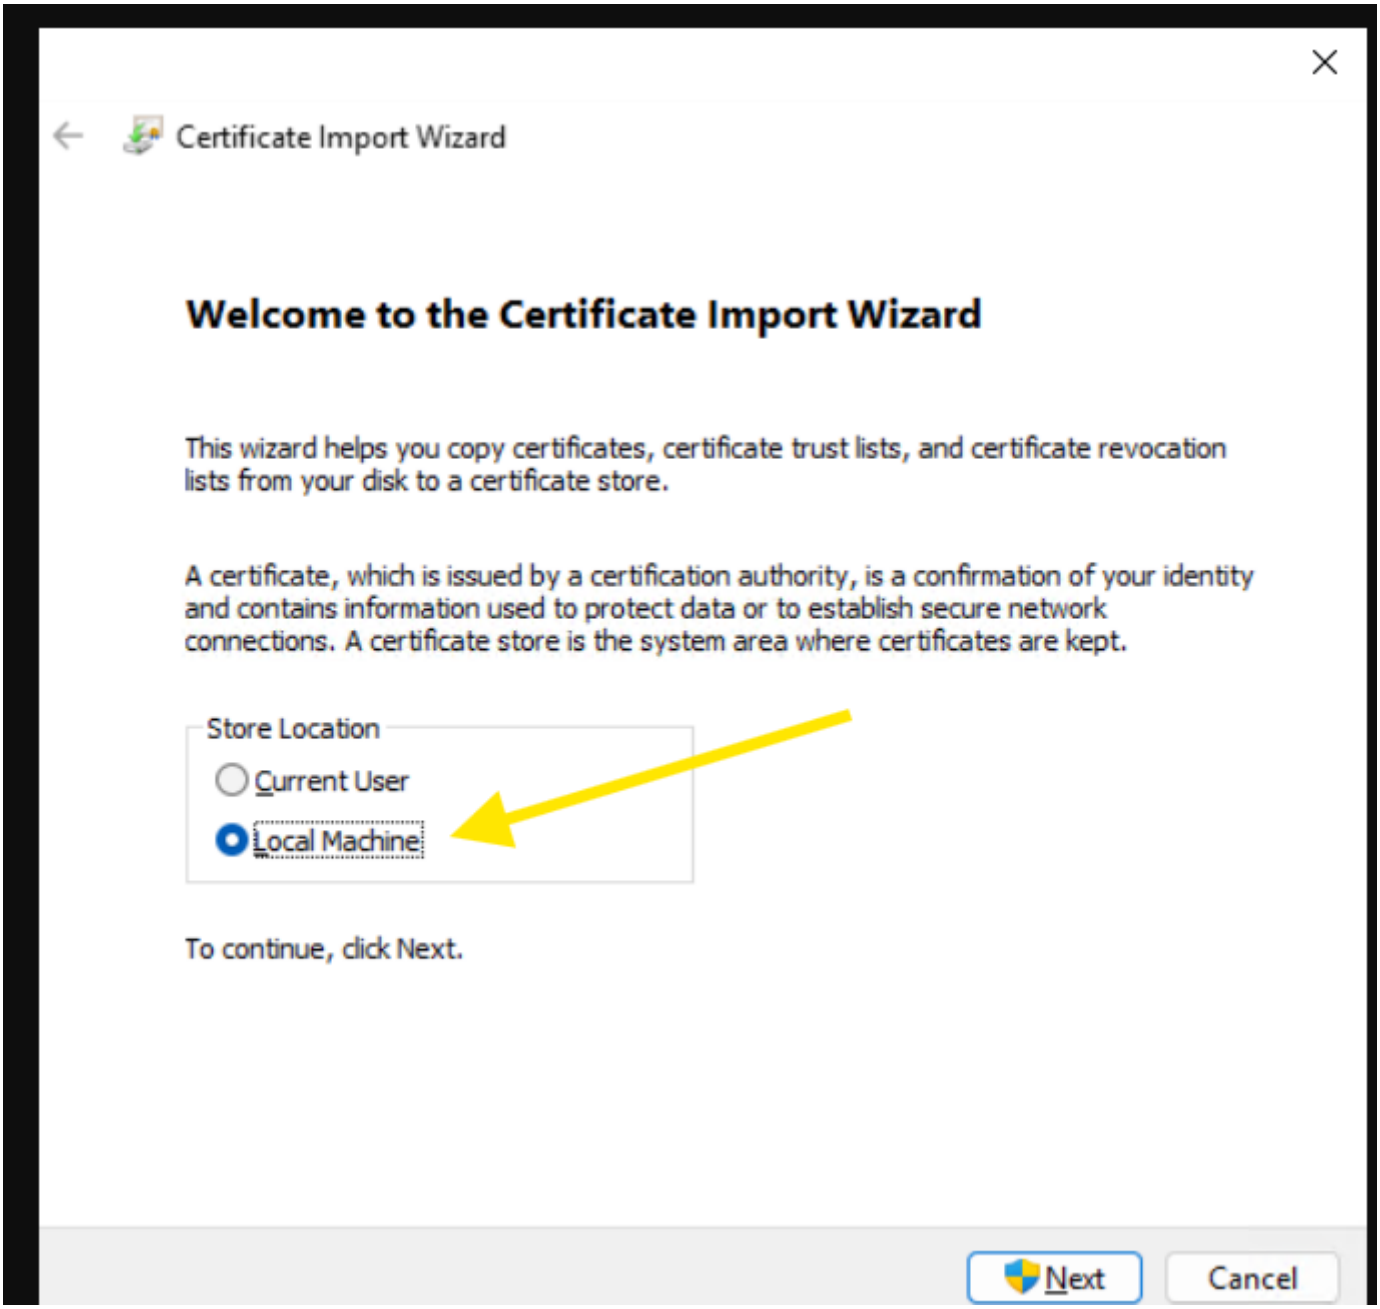

- Arkansas_State_University_Root_CA_certificate.cer
- Arkansas_State_University_Issuing_CA_certificate.cer

Windows GUI

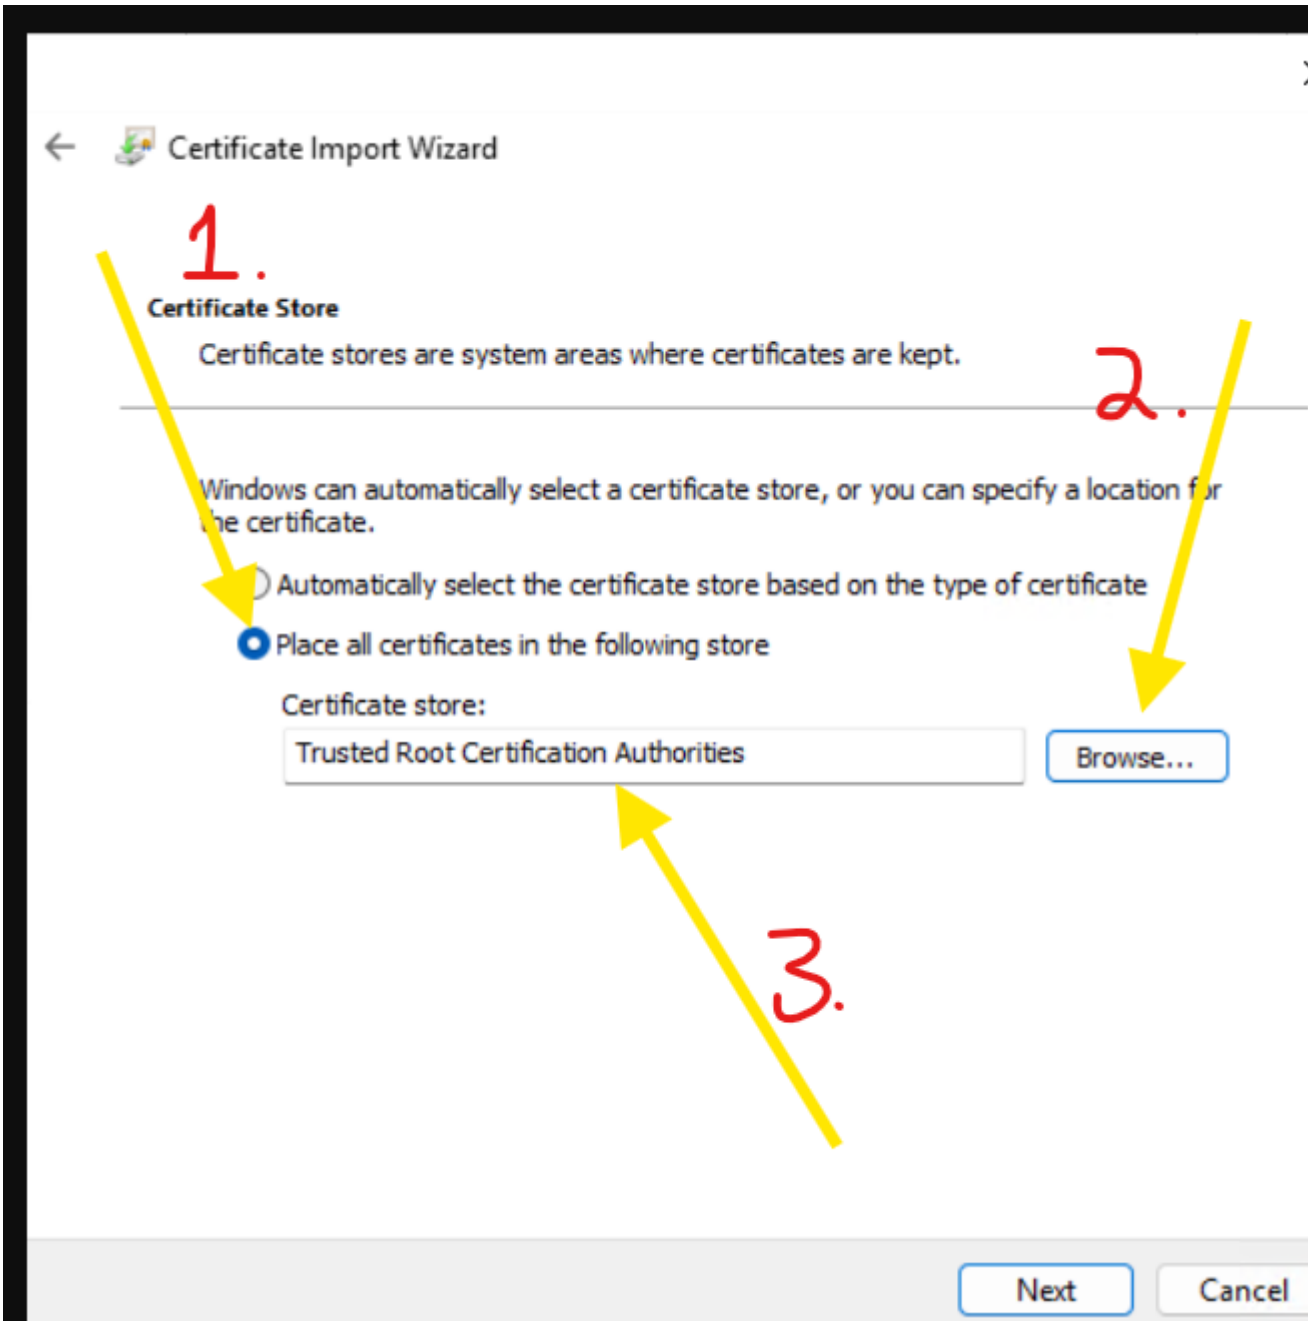

- Double click on the CA certificate to start the install process.
- Select **Install Certificate...**

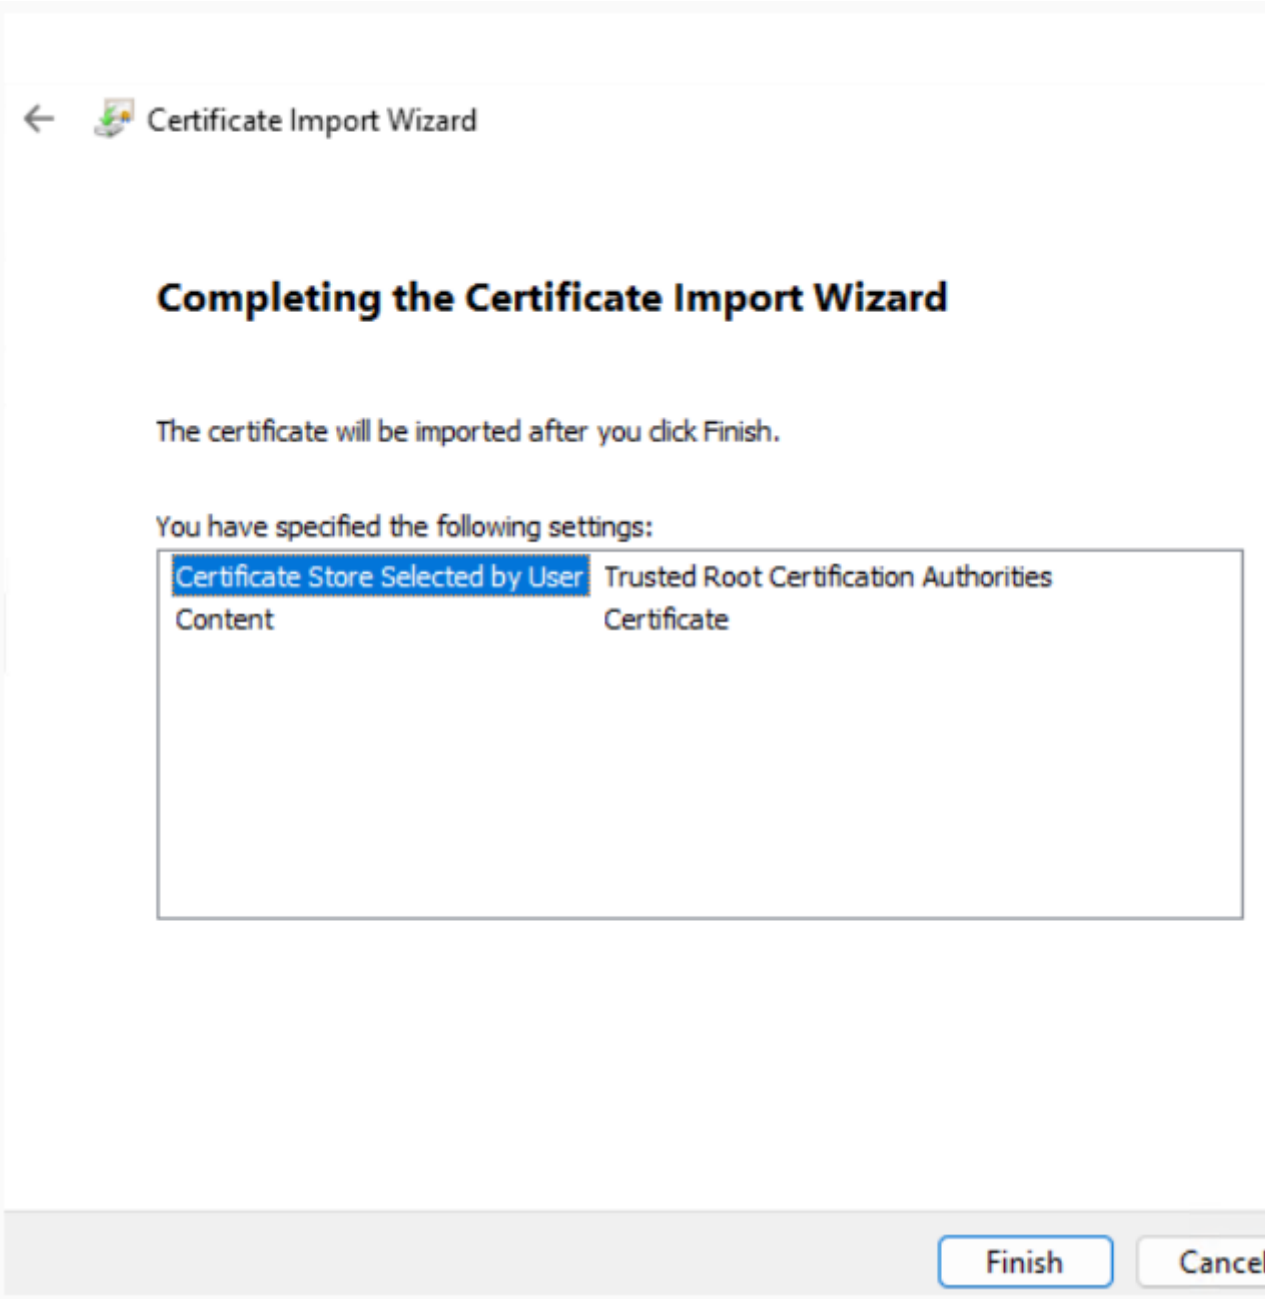

- Select `Local Machine` for the store location and click **Next**.

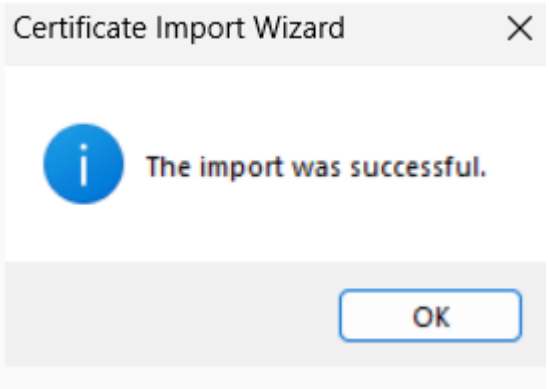

- On the `Certificate Store` dialog
  - Select `Place all certificates in the following store`
  - Select `Browse`
  - For the *Arkansas_State_University_Root_CA_certificate.cer* certificate
    - Choose the `Trusted Root Certification Authorities`
  - For the *Arkansas_State_University_Issuing_CA_certificate.cer* certificate
    - Choose the `Intermediate Certificatoin Authorities`
  - Click **Next**

- 

- Select **Finish**

- Select **Ok**

Windows prompt

From an administrative command prompt or PowerShell session, extecute the following two commands.

```
# Install the Root CA certificate
certutil -addstore -f root "C:\Users\user
account\Arkansas_State_University_Root_CA_certificate.cer"

# Install the Intermediate (Issuing) CA certificate
certutil -addstore -f intermediate "C:\Users\user
account\Arkansas_State_University_Issuing_CA_certificate.cer"
```

Linux

First copy the CA certificate(s) to the linux server/workstation and change the extension from `.cer` to `.crt`.

RHEL distributions

- Make sure that the `ca-certificates` package is installed

  ```
  sudo dnf install ca-certificates
  ```

- Copy the CA certificate(s) to `/etc/pki/ca-trust/source/anchors/`

  ```
  sudo cp CA_CERT /etc/pki/ca-trust/source/anchors/CA_CERT.crt
  ```

  Repeat for each certificate that needs to be added to the trust store.
- Update the system certificate trust store

  ```
  sudo update-ca-trust extract
  ```

  > **Tip**
  > `extract` is not strictly needed but it does provide more warnings if there is any issues.

- Verify the certificates were added to the trust store

  ```
  trust list | grep "My Private CA Name"
  ```

RHEL example

This example uses the Arkansas State University private certificate authority.

The following files were copied to the user account home directory.

- Arkansas_State_University_Root_CA_certificate.cer

- Arkansas_State_University_Issuing_CA_certificate.cer

```
# Copy the certificates to the correctly directory
# Note the extension change from .cer to .crt
$ sudo cp /home/user account/Arkansas_State_University_Root_CA_certificate.cer /etc/pki/ca-trust/source/anchors/Arkansas_State_University_Root_CA_certificate.crt
$ sudo cp /home/user account/Arkansas_State_University_Issuing_CA_certificate.cer /etc/pki/ca-trust/source/anchors/Arkansas_State_University_Issuing_CA_certificate.crt

# Update the ca trust store
$ sudo update-ca-trust extract

# Verify the certificates were added
$ trust list | grep "Arkansas State University"

# If the certificates were loaded into the trust store you should see the following output.
    label: Arkansas State University Root CA
    label: Arkansas State University Issuing CA
```

Debian distributions

- Make sure that the `ca-certificates` package is installed

  ```
  sudo apt install ca-certificates
  ```

- Copy the CA certificate(s) to `/usr/local/share/ca-certificates/`

  ```
  sudo cp CA_CERT /usr/local/share/ca-certificates/CA_CERT.crt
  ```

  Repeat for each certificate that needs to be added to the trust store.
- Update the system certificate trust store

  ```
  sudo update-ca-certificates
  ```

- Verify the certificates were added to the trust store

  ```
  awk -v cmd='openssl x509 -noout -subject' ' /BEGIN/{close(cmd)}; {print | cmd}' < /etc/ssl/certs/ca-certificates.crt | grep "My Private CA Name"
  ```

Debian example

This example uses the Arkansas State University private certificate authority.

The following files were copied to the **user account** home directory.

- Arkansas_State_University_Root_CA_certificate.cer
- Arkansas_State_University_Issuing_CA_certificate.cer

```
# Copy the certificates to the correctly directory
# Note the extension change from .cer to .crt
$ sudo cp /home/user account/Arkansas_State_University_Root_CA_certificate.cer
/usr/local/share/ca-certificates/Arkansas_State_University_Root_CA_certificate.crt
$ sudo cp /home/user account/Arkansas_State_University_Issuing_CA_certificate.cer
/usr/local/share/ca-certificates/Arkansas_State_University_Issuing_CA_certificate.crt

# Update the ca trust store
$ sudo update-ca-certificates

Updating certificates in /etc/ssl/certs...
rehash: warning: skipping ca-certificates.crt,it does not contain exactly one certificate or
CRL
2 added, 0 removed; done.
Running hooks in /etc/ca-certificates/update.d...
done.

# Note: you can ignore the rehash warnings about certificates 'does not contain exactly one
certificate or CRL'.

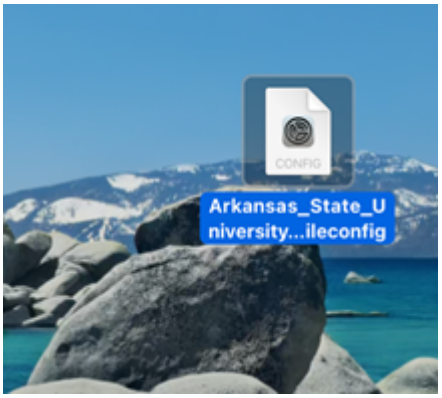

# Verify the certificates were added
$ awk -v cmd='openssl x509 -noout -subject' ' /BEGIN/{close(cmd)}; {print | cmd}' <
/etc/ssl/certs/ca-certificates.crt | grep 'Arkansas State University'

# If the certificates were loaded into the trust store you should see the following output.
subject=C=US, ST=Arkansas, L=State University, O=Arkansas State University, CN=Arkansas State
University Issuing CA
subject=C=US, ST=Arkansas, L=State University, O=Arkansas State University, CN=Arkansas State
University Root CA
```

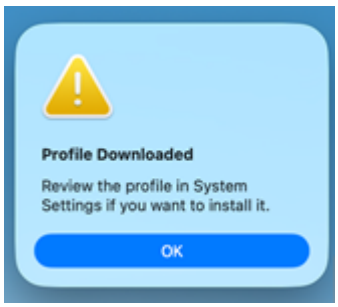

Installing the Certificate Profile on Mac/iPad (iOS)

To install the Certificate Profile.

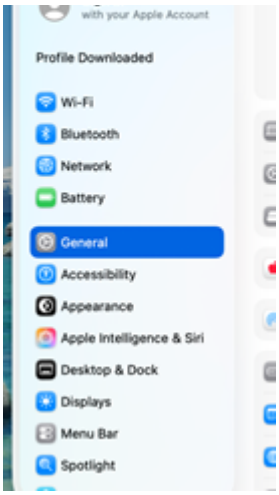

Click on the certificate profile app:

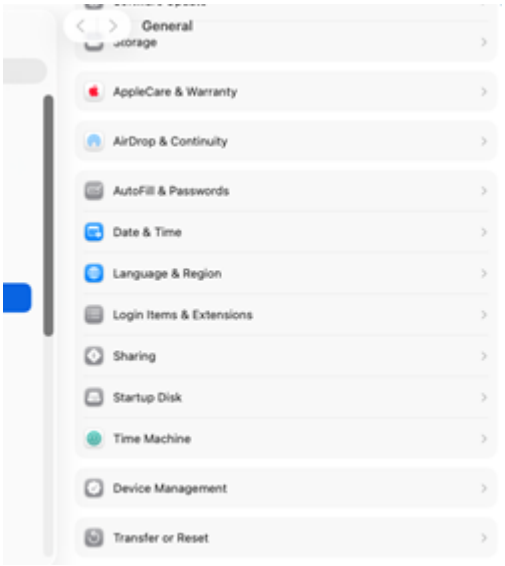

At the Profile Downloaded box click ok.

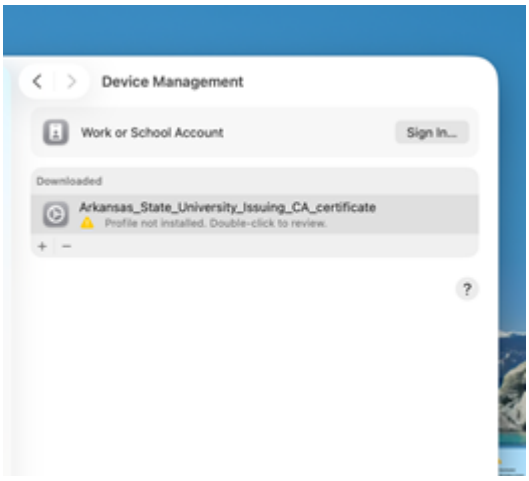

Go to System Settings and General.

Go to Device Management

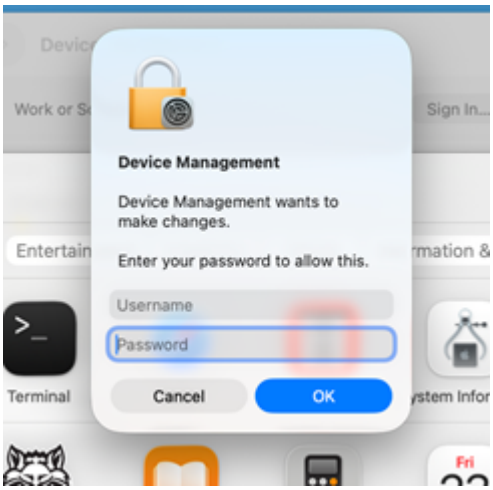

Under Device Management, you should see the Certificate Profile. Click on it to install.

In the *Are you sure you want to install this device profile*, click install.

It will prompt you for your username and password.

Onc e Certificate profile in Device Management.
