HAZARD COMMUNICATION

The **Hazard Communication Plan** is a program that is intended to inform workers of the chemical hazards in the areas where they work. This program is in compliance with Arkansas Department of Labor Safety Code #12 Public Employees' Chemical Right to Know Act. It is required that workers have access to Safety Data Sheets (SDSs) for the chemicals used in their area. A safety data sheet may be found by doing an internet search or by searching the University's SDS inventory.

Training is a key requirement in implementing a Hazard Communication program. Training can be found in the University's Learning Management System (LMS) Taleo Learn, found on your Pack Portal page.
